

The work carried out in LNP, which examined veterinary needs within the park has a number of goals, examples of which include:

- Providing support and guidance to the Government of Mozambique on health and disease issues at the wildlife/livestock/human interface,
- Developing an action plan providing guidance on how best to establish a program to address priority issues at the human/livestock/wildlife interface, including capacity building, in the interest of successful biodiversity conservation and development,
- Facilitating an interdisciplinary research program under the auspices of the GLTFCA AHEAD consortium,
- Working across disciplines towards sustainable improvements in human health and livelihoods from local to regional scales in the GLTFCA.
